TEAM #3926

ST. PAUL, MN

Nick Samsel, Oliver Johnson, Vlad Hugec, José Del Solar, Sid Carlson

SUMMER ROBOTICS

The MPArors are hosting a summer robotics camp, which started last week and is continuing Wednesday and Friday of this week from 3-6 in the lab. They are looking to recruit more members and sponsors for next build season, and are grateful for the new members they have already acquired. They are also in the process of building two robots to show off at Woodbury Days (8/23-8/25). For more information on Woodbury Days, go to www.woodburydays.com. We hope to see you there, either watching our robot run, or driving it yourself.

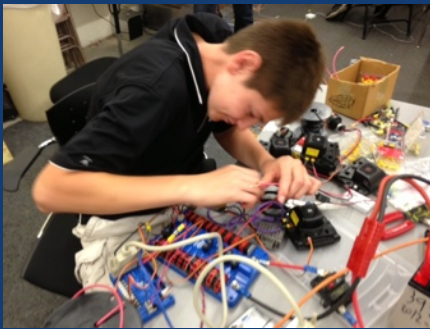

The MPArors create a game plan for building the two new robots, and accomplishing all the other tasks they wish to complete before the build season.

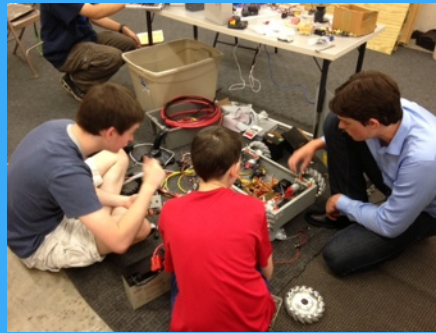

Captain Brendan Boyle teaches pneumatics to two of the new rookies, Oliver Johnson and Sid Carlson. Pneumatics will be used in one of the two new robots.

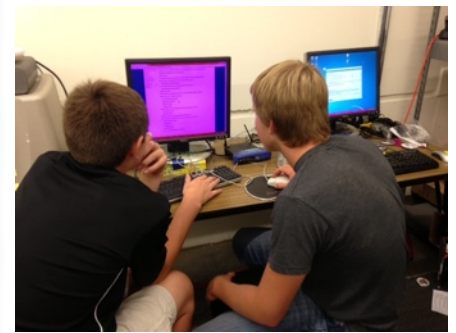

Rookie team members Oliver Johnson and Sid Carlson assemble c-channel to make the drive base for the larger of the two new robots.

Rookie team member José Del Solar is in the process of making new wires to use in the drive base for the larger of the two new robots.

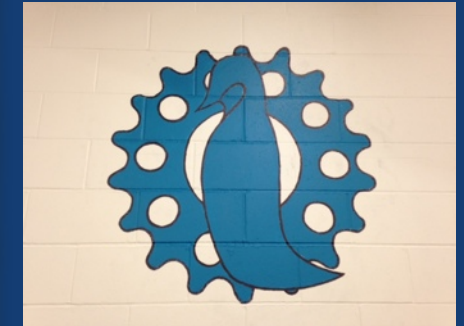

Former team member Alex Grabanski, helper Jordan Grabanski, and rookie Nick Samsel put the wheels on the smaller of the two new robots.

Rookies José Del Solar and Vlad Huges study the robot control system, which is used to tell the robot what to do and how to move.

Team member Michael Wilke is updating our team website, which you should check out at:
www.team3926.org.

Captain Michelle Galbavy decided the wall of the lab was blank and boring, so she painted the MPAror logo on the wall of the lab.
